

How to fit? Day/Night blinds

You will need:

- A drill with correct bit
- A crossheaded screwdriver
- A metal tape measure
- A pencil

You should have:

x1 P clip

x4 Raw plugs

Mounting brackets x2

x4 Wood screws

Your brackets are packed separately in the box. Please ensure you've located them before disposing of the packaging.

The brackets are a universal type that can be used to top fix the blind into a recess or face fix into a frame or a wall.

Please read the following instructions carefully before you start fitting your blind.

Step 1

Lift the blind cassette up and back to engage with the back of the mounting brackets.

Step 2

Once engaged, push the front of the cassette up into the front of the brackets. You should hear it click into place.

Warning

- Blinds can be potentially dangerous to small children. Please be aware that swallowing small parts can cause internal asphyxiation. Looped or low hanging cords, chains or tapes can create hazardous loops which could lead to the risk of strangulation. We do everything we can to ensure your chosen product is child safe. As a minimum all of our blinds meet the European Standard BS EN 13120 for safety. Our instructions and the supplied Child Safety device(s) are intended for you to ensure that your blind is as safe as possible.
- The information below gives guidance for fitting the provided child safety devices. All safety devices must be correctly installed for the protection from strangulation of young children and the proper use of the blind. Please read the instructions carefully and keep safe for future reference.
- Only use the devices and cords provided with your blind. Videos showing how to fit and reconnect child safety devices are available, along with replacements at: www.makeitchildsafe.co.uk.
